1. Problem 6.5 (page 665 of the text) with following additional assumptions:

Assume that the cache can distinguish a read miss that will allocate a block destined to have the Clean Exclusive state from a read miss that will deliver a Shared block. Simply assume that there is some mechanism to do so.

The question asks you to show the protocol in the format of Figure 6.12. Alternatively, you can show your answer in the format of Figure 6.10.
