Self Grading Guide.

You want to indicate mistakes, particularly mistakes of reasoning. So for example, if there is a missing base case, write “missing base case”, but there is no need to copy over the details of the base case, though if there are multiple base cases and some are missing, you should indicate which are missing. Or a mistake might be to have failed to move the bottom ring in the recursive case, or to have made too few (or too many) recursive calls.

In the end, imagine you are the grader, writing enough so that the student on receiving the paper can understand what is the mistake.
