

Transport Discrepancy: results and applications

Russell Luke

Workshop in honor of the 60th Birthday of Adrian Lewis
Seattle, 9–10 August, 2022

We introduce the transport discrepancy of a self mapping and show how this fundamental object appears in the convergence analysis of everything from splitting algorithms for optimization in Euclidean spaces, to flows on manifolds, to random function iterations on probability spaces. This provides a tremendous unification of ideas and a systematic scheme for categorizing notions of regularity across diverse settings and applications.
